Paragraph Rewriter

Date: 2024-10-05

G3 (98.9590) and G4 (98.1892) are calculated as 100 divided by the corresponding mid price. In the context of this example, G3 uses the mid price 101.0000, whereas G4 uses the mid price 102.6250. These numbers show how much \$100 today is worth at maturity indicating how bond prices influence the valuation of future cash flows.
